

DIMITAR BANEV

Full-Stack Developer

dimitar@banevdimitar.com • +359 892237336 • linkedin.com/in/banevdimitar

SUMMARY

Full-stack engineer with 4+ years of experience building and modernizing production applications across iGaming, SaaS, and data-intensive platforms. Strongest in TypeScript, JavaScript, React, Vue, and Nuxt, with solid backend experience in Node.js, Laravel/PHP, and Python. Experienced in end-to-end feature ownership, performance optimization, legacy modernization, service decomposition, and cross-team technical delivery.

SKILLS

Frontend: TypeScript, JavaScript, React, Redux, Vue, Nuxt, HTML, CSS/SCSS, TailwindCSS, Vuetify

Backend & APIs: Node.js, Laravel, PHP, Python, FastAPI, REST, gRPC/Protobuf

Architecture & Performance: Service decomposition, legacy modernization, SQL query optimization, API design

Data: PostgreSQL, MongoDB, Redis, caching

Cloud & Delivery: AWS (ECS, EC2), Docker, GitLab CI, GitHub Actions, Git

Testing & Quality: Vue Test Utils, Storybook, component testing, code review

EXPERIENCE

Full-Stack Developer — Delasport

Aug 2024 – Aug 2026

- Owned development across frontend and backend for regulatory and compliance capabilities supporting operations in the **UK, Canada, and Brazil**, integrating external services including GAMSTOP, iGamingOntario, AlbertaGaming, SEON, and SIGAP
- Designed and implemented an automated daily compliance screening process handling **50,000+ records every 24 hours**, reducing manual intervention in regulatory checks
- Built backend endpoints and client-facing CRM views that surfaced compliance and member data to internal teams, including clear status indicators for flagged accounts
- Improved application performance by **35–40%** through PostgreSQL query optimization and Redis-based caching, reducing database load during peak traffic
- Modernized a legacy Phalcon platform by defining service boundaries and extracting **two domain modules into independently deployable services** using the Strangler pattern
- Mentored **6 engineers across 2 teams**, providing technical guidance, code-review support, and day-to-day engineering mentorship

Full-Stack / Frontend Developer — Enetpulse

May 2022 – Aug 2024

- Expanded from frontend to full-stack ownership on the OddsPortal platform, delivering backend functionality in Laravel/PHP alongside React/Redux and Node.js services using gRPC/Protobuf
- Built the **betslip feature end-to-end**, developing both the frontend experience and supporting Laravel/PHP backend functionality
- Designed and implemented AWS ECS infrastructure and GitLab CI pipelines to onboard **two acquired products** onto the platform, including automated linting checks as part of the deployment workflow
- Resolved a critical production incident caused by subquery-heavy homepage queries that overloaded the backend, then redesigned the data-loading strategy around chunked infinite scrolling, cutting external API requests by **~80%** and preventing a full outage
- Designed a reusable, caching-enabled API layer adopted across multiple internal products
- Built reusable and accessible UI component systems across React and Vue, supported by component-level testing with Vue Test Utils and Storybook

EDUCATION

M.S. IT Project Management — New Bulgarian University

2023 – 2024

B.S. Informatics — New Bulgarian University

2019 – 2023

CERTIFICATIONS

AWS Certified Cloud Practitioner
